

SR SENIOR FORMULA

Sentinel® Senior, is the new generation in equine nutrition formulated specifically for senior horses, prematurely aging horses or horses with poor teeth. Sentinel® Senior is a highly fortified balance of nutrients and an exclusive blend of natural additives to meet the increased nutritional demands of the senior horse due to less efficient digestive and metabolic systems. This unique formulation of Sentinel® Senior is also recommended for certain senior horses with challenged digestive and/or metabolic systems. A pressure-cooked feed offers a safe and natural way to provide essential nutrition and calories to senior horses, prematurely aging horses or horses with poor teeth and is easily digested for optimal nutrient utilization.

GUARANTEED ANALYSIS

Crude Protein, Min.	14.5 %
Lysine, Min.	0.65 %
Methionine, Min.	0.30 %
Threonine, Min.	0.50 %
Crude Fat, Min.	5.5 %
Crude Fiber, Max.	16 %
Calcium, Min.	0.65 %
Calcium, Max.	1.15 %
Phosphorus, Min.	0.65 %
Copper, Min.	55 ppm
Manganese, Min.	135 ppm
Selenium, Min.	0.55 ppm
Zinc, Min.	165 ppm
Vitamin A, Min.	5,000 IU/lb
Vitamin E, Min.	145 IU/lb
Biotin, Min.	0.45 mg/lb
Total Omega-3 Fatty Acids, Min.	3.0 g/lb
Total Omega-6 Fatty Acids, Min.	17.0 g/lb
Total Bacillus Species, Min.	454 million cfu/lb
(Bacillus Lichenformis, Bacillus Subtilis)	

1 qt = 0.85 lbs

Immune System Support – Antioxidant nutrients aid in maintaining the integrity and strength of cells and tissues in senior horses, helping to sustain health and wellness under the stresses of aging.

Strong and Healthy Tissues – Amino acids such as Lysine, Methionine and Threonine are the building blocks of quality protein necessary for maintenance of all body tissues including bone, muscle, hoof and hair in older horses. Amino acids are also important in regulating body activities and helping form antibodies that fight infections.

Body Structure and Function – Biologically available minerals and vitamins help build and maintain body tissues, help regulate metabolic activities and help support the immune system to sustain overall health.

Low Starch and Sugar Ingredients – A low starch and sugar diet is often recommended by veterinarians and nutritionists for horses with a history of metabolic and/or digestive challenges, such as Cushing's, insulin resistance, tying up, DOD, EPSM, colic and laminitis.

Healthy Rate of Intake – The light and airy nature of pressure cooked feeds may facilitate the breakdown of feed for horses while encouraging slower consumption and more thorough chewing. A slower rate of intake with more complete chewing may help minimize the risk of digestive upsets, such as colic and choke.

High Nutrient Density – Provides more actual nutrition by weight; you may feed less while delivering more of what your horse needs for optimum health and ideal body condition.

Stable Digestive Environment – Direct-fed microorganisms and fermentation products aid in maintaining healthy digestion and active microbial fermentation for sustained nutrient digestibility, absorption and assimilation. These additives may support the presence of beneficial bacteria in the gut, resulting in sustained horse health and a more stable digestive tract environment.

Built-In Fiber – Highly fermentable fiber sources such as soybean hulls, alfalfa meal, beet pulp and rice bran support healthy digestive activity while providing extra calories in a safe and natural form.

Healthy Skin and Hair Coat – Highly digestible fat from Soybean Oil and Flaxseed (sources of Omega-3 and Omega-6 fatty acids) helps provide extra calories for maintaining ideal body condition and helps promote a healthy skin and hair coat.

Brain and Visual Support – Docosahexaenoic Acid (DHA), an Omega-3 fatty acid, is a structural component of nerve cells in the brain and eyes and a key component of heart tissue. Studies have shown that DHA is important for mental and visual development and plays a key role in the anti-inflammatory process.

Fixed Formula – A consistent formula, bag after bag, featuring only the highest quality ingredients, to prevent sudden changes in the diet to improve digestive health and function.
